

All of our candles and wax melts are made with a 100% natural soy wax that is biodegradable and vegan friendly. As all of our products are hand poured and detailed, there will be natural variation between each item, making each and every one uniquely yours.

Wax Melt and Burner Safety Info: Wax melts should only be used in appropriate wax melt burners. Always read the safety information provided with your burner prior to use. Do not over fill the wax melt burner as wax will spill over. Do not use metal or sharp objects to clean out wax as this may crack or damage the burner or cause injury!

Directions for Use: Place the wax melt burner on a level, flat, cool, heat resistant surface away from draughts, other heat sources and flammable objects. Position the wax melt in the top bowl of the burner and a tea-light in the bottom base. Allow the heat of the tea-light to melt the wax and fragrance will release into the room. The wax melt burner will become hot while in use so allow the burner to cool completely before touching or moving. Do not allow the pool of wax to completely evaporate. This could cause the wax melt burner to scorch and smoke. Let the wax melt burner completely cool before re-use. Failure to follow these instructions could result in a fire hazard:

- Never leave a burning candle unattended or move it when lit.
- Remove all packaging before use.
- Only use with a good quality tea-light. Do not use with a maxi tea-light, votive or other candle.
- Keep the wax melt burner and tea-light out of the reach of children and pets.
- Do not leave the wax melt burner on or near anything that can catch fire and keep foreign objects out of the wax pool.
- Extinguish the tea-light if the flame becomes enlarged or contacts the wax melt burner.
